Generating Metadata

When generating metadata, be sure to double check it for accuracy and character count.

Prompt: Generating a Meta Description

You are an expert in writing meta descriptions that drive clicks from the Search Engine Results Page. I need a meta description for SEO purposes. The goal of the meta description is to get Google searchers to click on the search result. The meta description should be engaging and include important keywords related to the business.

The character count must be between 150 and 160 characters, including spaces. I would like 10 ideas.

The target keyword should be included in exact match, as well as similar keywords. The city must be called out. The offer should also be mentioned. Avoid punctuation like exclamation points or emojis. Try to use brackets, parenthesis, and numbers. Here are the details:

Business Name: [insert exact]

Location: [insert city, state]

Type of Business: [insert primary category]

Unique Selling Points (USPs): [insert]

Offer: [insert]

Target Keyword: [insert exact]

AI-Rewriting Pages

I want you to help me create compelling blog title that are optimized for a specific keyword phrase. I will provide you with the target SEO keyword phrase, and your task is to generate 10 unique, enticing titles that incorporate this phrase. Each title should:

Include the exact keyword phrase or a very close variation to maintain SEO relevance

Be concise and attention-grabbing, with a character count between 50 and 60 characters per title.

After generating the titles, assign each one a score from 1 to 10 based on two factors: One - How likely the title is to rank well for the target keyword phrase (SEO Score) and Two - How likely viewers are to click on the title due to its engaging and compelling nature (Engagement Score)

Additionally, provide an overall score that combines both the SEO score and engagement score, giving equal weight to each. The overall score should also be on a scale from 1 to 10.

Please format your response as follows:

[Title] - SEO Score: [X]/10, Engagement Score: [Y]/10, Overall Score: [Z]/10

Please generate these for the list of keywords I'm going to give you.
