Determining Local Rank Map Size

1.5x

4 min ⚡ 2 min 37 sec

In this lesson, we walk through how to properly size your rank maps by reading the number one player's results.

The key indicator is the top 3% score of the number one ranked competitor. If they're sitting at 100% top three, your map is too small — or you need to rerun the keyword without the city name. Which one depends on whether the map already covers the full city boundary. If it does, there's no point making it larger with the city name still in the keyword, because people searching from well outside the city limits aren't going to include that city name in their search.

On the other end, if the number one player is only at 32% top three or lower, the map is too large. You can tighten it by reducing the distance between grid points, or by adding the city name back into the keyword — both effectively shrink the map's scope.

99+

Of the top three as the map extends outward. When you see that pattern, you know the map is sized correctly and you can move forward with your analysis.

One important note: running a keyword with the city name will always produce a better-looking rank map for businesses
