Disavowing Existing Backlinks

4-min ⚡ 3 min 14 sec

The practice of disavowing backlinks is one of the more controversial and situational tactics in SEO. Understanding when and how to use Google's disavow tool can protect your site from harmful links while avoiding unnecessary risks to your rankings.

Disavowing is the process of telling Google to ignore incoming links from specific domains. This is done through Google Search Console using a special text file that lists the domains or URLs you want Google to disregard when calculating your site's authority and rankings.

Note: The effectiveness of disavowing fluctuates with Google's algorithm updates. Sometimes it provides significant value, other times it has minimal impact.

Links remain a crucial ranking factor in Google's algorithm. The importance of backlinks becomes starkly apparent when you consider what happens if you disavow all incoming links to a website—rankings typically plummet dramatically.

How to Safely Disavow Backlinks

Step 1: Export Your Backlink Data

Always use Google Search Console rather than third-party backlink checkers for the most accurate data:

1. Navigate to the "Links" section in Search Console
2. Go to "External links"
3. Export the latest data as a CSV file

This will give you a comprehensive list of all domains linking to your site.

Step 2: Analyze Link Quality with AI

Rather than manually reviewing hundreds or thousands of backlinks, you can use AI to streamline the process:

1. Upload your CSV file to an AI tool like ChatGPT
2. Use a specialized prompt to analyze link quality
3. The AI will categorize links and provide recommendations for which domains to disavow

The AI analysis typically checks factors like:

- Domain indexation status
- Link relevance and quality

- Overall domain authority

Step 3: Create and Upload Your Disavow File

Once you have your list of low-quality domains:

1. Create a text file in the proper format required by Google
2. Navigate to Google's disavow tool (search "Google disavow tool")
3. Select your property
4. Upload your disavow file

⚠ Critical Warning: Google displays a warning before you submit because disavowing can potentially harm your rankings if done incorrectly. Proceed with caution.

Guidelines for Safe Disavowal

✓ ✓ ✓ When TO Disavow

• **De-indexed domains:** If Google has removed a linking

• **Obviously spammy sites:** Domains with clear spam indicators or unnatural link patterns

• **Irrelevant or low-quality directories:** Link farms and irrelevant directory submissions

99+

✖ ✖ ✖ When NOT to Disavow

- **Indexed domains:** If a domain still appears in Google search results, it may have value
- **Relevant links:** Even if from lower-authority sites, relevant links often provide value
- **When in doubt:** It's generally safer to leave questionable links alone rather than risk disavowing valuable ones

Verification Methods

Before disavowing domains, verify their status:

- Use tools like indexchecking.com to check if domains are still indexed
- Manually search for the domain in Google
- Review the actual linking pages for context and relevance

 **Pro Tip:** Most index-checking tools have limits (like 20 URLs at a time), so you may need to check domains in batches.
