AI-Rewriting Pages

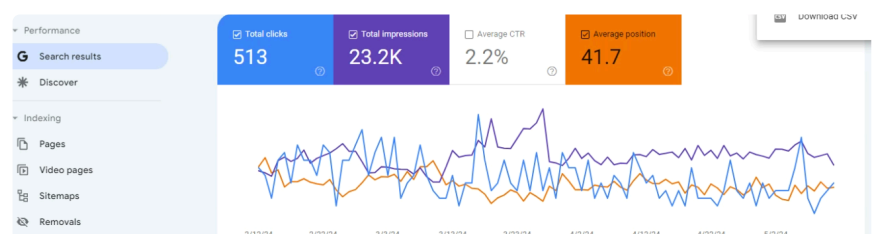

1.2x

8-min ⚡ 7 min 1 sec

This lesson demonstrates how to systematically improve existing content that's performing well but could rank higher. Using Google Search Console data combined with AI, you can identify pages ranking on the second page (positions 11-20) and optimize them to reach the first page with strategic content additions.

When a page ranks in positions 11-12 for a query but doesn't contain the exact match keyword, simply adding that keyword can improve rankings by several positions. This small improvement is often enough to move content from page 2 to page 1—a massive traffic boost.

The 6-Step Process

Step 1: Identify Target Pages in Search Console

Creating a Content Planner

AI-Rewriting Pages

have room for improvement

3. Select a page that shows potential (avoid pages with mixed rankings—some on page 1, others on page 10+)

4. Click on the URL to filter your data to that specific page

Step 2: Analyze Page Performance

1. Switch to the **Queries** tab to see all search terms for your selected page
2. Look for queries where you're ranking on the second page (positions 11-20)
3. Focus on commercial or buying keywords if you're working with an e-commerce site
4. Export the data as a CSV file for AI analysis

Step 3: AI Content Analysis and Rewrite

1. Upload the CSV file to your AI tool (ChatGPT or Claude)
2. Copy the existing page content
3. Use the provided prompt to have AI analyze the CSV data and rewrite the content to include exact match keywords

Note: The specific prompts for this process are available in the course resources. You don't need to create these from scratch.

Step 4: Identify Primary Target Keyword

1. Ask your AI tool to identify the most important keyword the page currently ranks for
2. This becomes your primary optimization target

People also ask :

Is a wire crate better than a plastic crate?

Which is better, kennel or crate?

Are plastic kennels good for dogs?

Are plastic dog crates safe?

What is the best material for a kennel?

Step 5: Generate FAQ Content Using "People Also Ask"

1. Search Google for your primary target keyword
2. Expand the "People Also Ask" section by clicking through multiple questions
3. Copy all the questions and feed them to your AI tool
4. Request an FAQ section that:
 - Separates questions directly answered by existing content from those that aren't
 - Focuses first on questions that can be answered using only your existing content (reduces hallucination risk)
 - Provides comprehensive answers to establish topical authority

Important: Always fact-check AI-generated content, especially when the AI draws from external sources rather than your provided content.

Step 6: Plan Supporting Content Articles

1. Ask your AI tool which FAQ questions would work well as standalone articles

3. Use these as supporting content that can link back to your main page

4. This creates a content hub that reinforces your topical authority
