Multi-Location Site Structure Strategy

Learn how to properly structure a multi-location website for maximum local SEO performance while protecting existing rankings and scaling content across multiple markets.

What You'll Learn

This lesson covers the complete strategy for structuring multi-location sites with multiple GBPs (Google Business Profiles). You'll discover why the default practice of linking all GBPs to the homepage isn't optimal, and learn the recommended hierarchical structure that gets ranking results faster by providing clear, location-specific information directly relevant to user searches.

The most critical lesson: never move a GBP landing page URL if it's already ranking. You'll see a real example of an 8-location

99+

well. The training walks through treating each GBP landing page as its own mini-homepage, complete with the same Core 30 structure, and explains why 90% of local business traffic goes to the GBP landing page (not the actual homepage).

The lesson emphasizes making it as easy as possible for search engines to understand the geographical relevancy of your pages, which directly helps potential customers find services in their local area. You'll learn advanced strategies for high-competition markets, including when to create duplicate category/service pages without city names for navigation, and how to scale from 12 pages for a single location to 40+ pages across multiple locations.

Key Takeaways

Core Principles:

- **Unique Landing Pages:** Each location must have its own dedicated landing page with distinct URL for optimal SEO
- **Distinct Phone Numbers:** Never share phone numbers across GBPs—use unique tracking numbers even if routing to the same place
- **Homepage Authority:** Link your most competitive location to the homepage to leverage its superior ranking power
- **Critical Rule:** Always run a local rank map before changing GBP landing pages—moving a ranking GBP will lose positions

Advanced Structure:

- Each GBP landing page functions as a mini-homepage with its own complete Core 30 hierarchy
- High-competition markets need city-agnostic category/service pages for navigation to avoid cross-location confusion
- Scale content aggressively with AI tools—replicate service/category structures across all locations
- ~90% of local business traffic goes to GBP landing pages, making them more strategically important than the actual homepage
