Scope-Based Pricing Calculator Walkthrough

Learn how to calculate transparent, scope-based pricing for SEO clients using a detailed cost breakdown that builds trust and sets clear expectations.

What You'll Learn

This lesson provides a complete walkthrough of the actual pricing calculator used in a working agency to determine scope-based pricing for SEO engagements. You'll see exactly how to break down every cost component—from team pay rates across different roles (SEO expert, copywriter manager, copywriters, schema/image specialists, developers) to the precise time allocation for each step in the content production process.

You'll learn why transparency matters: when clients understand exactly what they're paying for—specific article counts, word counts, link commitments—they're more likely to trust the process and remain patient as results develop.

Determining Local Rank Ma...	The calculator includes real cost breakdowns for money articles (~2,000 words at \$0.04/word) and supporting content (1,500 words at \$0.02-0.03/word), demonstrating the 75% cost reduction achieved through AI-assisted content while maintaining quality through human editing. You'll see how to account for month-one setup costs (Claude projects, GBP audits, landing page optimization) without charging setup fees by reducing first-month article count, and how to apply appropriate gross margins (50-70%) that account for the bare-bones nature of pure SEO fulfillment costs. Key Takeaways Pricing Components: • Team Pay Rates: Customize for all roles involved (SEO expert, copywriter manager, copywriters, schema/image specialists, developers) • Per-Article Costs: Include every step from keyword research through final review, plus one medium-quality link per article • Month-One Costs: Account for setup (Claude projects, GBP audit, landing page audit) by reducing first-month article count instead of charging setup fees • AI Cost Advantage: \$0.02-0.04/word vs. traditional \$0.10-0.15/word (75% reduction with human editing maintained) Pricing Strategy: • Apply 50-70% gross margin to cover unforeseen revisions, client feedback, and business overhead • Calculate: (Content Cost + Link Cost) × Margin Multiplier = Client Price • Adjust scope based on competition: higher competition needs longer articles, more supporting content, better links • Always include human editing phase for quality and E-E-A-T
