AI Content Prioritization - Geographic Relevance

1.5x

~~2 min 5 sec~~ ⚡ 1 min 23 sec

After establishing your [Core 30 content structure](#), the next challenge is determining which specific geographic areas and keywords to target first. Rather than guessing or randomly selecting neighborhoods, we'll use AI to analyze ranking data and prioritize content creation based on actual opportunity.

When working with local SEO, you'll often face hundreds or thousands of potential keyword-location combinations. For example, a plumbing company in a major metropolitan area might have:

- 50+ services to target
- 20+ neighborhoods or suburbs
- Multiple keyword variations for each service

This creates an overwhelming matrix of content possibilities. AI

Overview

Start by accessing your Local Dominator dashboard and downloading the CSV export of your rank tracking data. This file contains comprehensive ranking information across all tracked keywords and locations.

🔴 **Note:** The exported CSV typically contains 1,000+ rows of data, including rankings for your client and all tracked competitors. This is too large to process directly in Claude, so we'll need to filter it first.

Step 2: Filter for Your Client's Data

1. Open the CSV in your spreadsheet application
2. Select the header row
3. Apply a filter to the entire dataset
4. In the "Business" column, unselect all options
5. Select only your client's business name

Step 3: Prepare Data for Claude

Here's the crucial step that ensures Claude can process your data effectively:

1. Click on the column header to select the entire filtered view
2. Navigate to **Home** → **Find & Select** → **Go to Special**
3. Choose **Visible Cells Only**
4. Copy the selected data

⚠ **Important:** If you skip the "Visible Cells Only" step, you'll copy hidden rows and Claude will likely return an error about too much data.

- **Business concentration** in each area
- **Competition levels** across locations
- **Current ranking positions** by geography

Keyword Opportunities

- **Ranking gaps** where you're close to page one
- **Search volume estimates** based on service type
- **Competition difficulty** for specific terms
- **Quick win opportunities** (rankings 4-10)
- **Highly profitable areas** (current rankings lower, but demographics show high value ranking in this location)

💡 **Related Lesson:** Review [Identifying Low Competition](#) for additional strategies on finding untapped keyword opportunities that complement this AI-driven approach.

🤖 Content Prioritization Prompt 🤖

Please analyze the following rank data to identify content opportunities:

Rank map target keyword: **[INSERT HERE]**

The goal is to improve geographic relevance for specific locations for the target keyword above.

Data Format: CSV with columns:

- Scan Date
- Latitude/Longitude

Analysis Requirements

- Identify areas with weak ranking performance
- Map rank patterns across coordinates
- Note rank variations by neighborhood

Creating a Content Planner

AI-Rewriting Pages

2. Competitor Analysis

- Identify neighborhoods with consistent rank drops
- Note patterns in competitive areas
- Highlight geographic gaps

3. *Keyword Opportunity Analysis*

- List neighborhoods with ranking potential
- Suggest location-specific keyword variations
- Prioritize by ranking difficulty/opportunity

4. Content Recommendations

- *Propose neighborhood-focused content topics*
- *Include geographic modifiers*
- *Target specific service areas with poor visibility*

Expected Output

1. Priority neighborhood list ranked by opportunity. Priority should be given to areas that are already close to the top 3 unless there is a compelling reason otherwise. Make this reason clear.

2. Specific keyword targets for each neighborhood. At least 3 exact target keywords for each area that needs rank improvement relevant to that area and the target keyword. The target keyword for the overall rank map is given above and keep that in mind

3. Content topic suggestions with geographic focus. Find geographic landmarks or similar to focus the content on. For example, "plumber near wrigley field chicago"

4. Ranking improvement potential estimates

99+

Which neighborhoods were selected to target and why. Rank each neighborhood on a scale of 1-10 for prioritization in terms of ease of ranking and traffic potential.

1. Neighborhood name
1. Target keyword 1
2. Target keyword 2
3. Target keyword 3
2. Neighborhood two name
1. Target keyword 1
2. Target keyword 2
3. Target keyword 3
3. And so on in this format

Understanding Claude's Output

Claude will provide a prioritized list that typically includes:

1. **Immediate Opportunities:** Keywords where you're ranking 11-20 (just off page one)
2. **High-Population Targets:** Neighborhoods with the most potential customers
3. **Low-Competition Wins:** Areas where competitors haven't established strong presence
4. **Strategic Expansions:** Logical next steps based on your current strengths

Sample Priority Structure

Priority 1: Downtown Plano - "emergency plumber"

99+

- Recommendation: Create dedicated neighborhood page

Priority 2: West Plano - "water heater repair"

- Current Rank: 18
- Population: Growing area

- Competition: Low
- Recommendation: Develop service-specific content

Implementing Your Priority Plan

Content Creation Workflow

1. **Start with Priority 1 items** - These offer the fastest potential returns
2. **Batch similar content** - Group neighborhood pages or service pages together
3. **Track progress weekly** - Monitor ranking improvements as you publish
4. **Adjust priorities** - Re-run the analysis monthly as rankings shift

 **Pro Tip:** Claude has extensive data on neighborhoods, demographics, and local characteristics. Don't hesitate to ask follow-up questions about specific areas to enhance your content strategy.

Maximizing Efficiency

Time-Saving Strategies

- **Template development:** Create templates for neighborhood and service pages based on top priorities
- **Batch processing:** Generate multiple pieces of content in one Claude session
- **Strategic scheduling:** Plan content rollout based on

99+

 **Related Lesson:** Check out [Generating Supporting Content](#) for specific techniques on efficiently creating the prioritized pages identified through this process.

Common Pitfalls to Avoid

1. **Over-prioritizing based on population alone** - High population doesn't always mean high conversion
2. **Ignoring seasonal factors** - Some services have peak seasons that affect priority
3. **Neglecting current strengths** - Sometimes expanding where you already rank well yields faster results
4. **Analysis paralysis** - Don't spend weeks analyzing; start creating content and adjust as you go

Measuring Success

Track these metrics to validate your prioritization strategy:

- **Ranking improvements** in targeted keywords/locations
- **Traffic increases** to new geographic pages
- **Lead quality** from different neighborhoods
- **Conversion rates** by location

 **Next Steps:** Once you've identified your priorities, move on to creating optimized content. The [Generating Service & Category Pages](#) lesson will show you exactly how to create high-performing pages for your prioritized targets.
