Technical Audit

1x

6 min

A technical audit is a comprehensive analysis of a website's technical health and SEO performance. While not necessary for every client, it becomes essential when working with large websites in competitive spaces. In this lesson, you'll learn how to conduct a professional technical audit using Screaming Frog and AI to identify critical issues that impact local SEO performance.

When to Perform Technical Audits

Technical audits are reserved for your largest clients—specifically those with the largest websites. Here's when you should consider one:

- **Website size:** More than 500 URLs (requires Screaming Frog license)

- **Budget:** Client has resources to implement comprehensive fixes

Note: The example in this lesson features a plastic surgeon in Houston with 1,400 URLs—a perfect

candidate for technical auditing due to both website size and competitive market.

Setting Up Screaming Frog

Before running your audit, you'll need to configure Screaming Frog properly:

1. Configure PageSpeed Insights API

- Navigate to **Configuration** → **API Access** → **PageSpeed Insights**
- Click the provided link to obtain a free API key
- Enter your API key in the designated field

 **Important:** Without the API key, your PageSpeed data will be blank, missing crucial performance insights.

2. Running the Crawl

- Enter the client's homepage URL
- Click **Start** to begin crawling
- Note: Crawls with PageSpeed API enabled take longer but provide essential performance data

Exporting Required Data

Once your crawl is complete, you'll need to export specific datasets for AI analysis. Export the following files:

From Screaming Frog:

- page_titles_all.csv - Title tag analysis
- meta_description_all.csv - Meta description analysis
- response_codes_all.csv - HTTP status codes
- images_all.csv - All image files
