How ChatGPT Makes Recommendations

1.2x

4 min ⚡ 3 min 26 sec

Understanding how ChatGPT evaluates and recommends businesses is crucial for optimizing your local SEO strategy in an AI-driven search landscape. While ChatGPT and Google share similar foundational goals, their methods and priorities differ significantly.

Both ChatGPT and Google face the same core problem that search engines have been solving for decades: **determining whether a third-party website or business is trustworthy based solely on information available on the internet.**

Their shared goal is simple—keep users engaged with their platform. Google wants you to stay on Google-owned properties as long as possible, while ChatGPT wants to keep you actively chatting. Neither platform cares about your personal identity; they're focused on validating whether enough trusted sources confirm that your business is legitimate.

💡 **Key Insight:** ChatGPT often references information that's years old, as long as it's relevant to answering the user's question. This means your foundational content remains valuable longer than with traditional Google SEO.

Creating a Content Planner

AI-Rewriting Pages

Google's Approach

- Actively crawls the entire internet
- Prioritizes recency and fresh content
- Updates rankings based on real-time information

ChatGPT's Approach

- **Does not crawl the internet independently**
- Pulls from Bing API for search results
- Relies on pre-trained data (up to 2023)
- Can generate real-time search results through Bing
- **Recency is less important**—will reference older content if it's relevant

**Related Lesson:** [Data Source: ChatGPT VS. Google](#)

Semantic Similarity vs. Exact Match Keywords

This is where ChatGPT fundamentally differs from Google's approach:

Google's Method

- Heavily relies on exact match keywords
- Uses semantic similarity as a supporting factor

ChatGPT's Method

- **Ignores exact match keywords almost entirely**
- Focuses primarily on semantic similarity
- Reads and analyzes the actual content and meaning

When ChatGPT reads reviews about your plumbing business, it doesn't look for phrases like "best plumber" (which feels spammy). Instead, it identifies semantic patterns like:

- "The plumber was **fast**"
- "Left everything **clean**"
- "**Well-priced** service"
- "**Professional** and courteous"

Reviews mentioning similar qualities and experiences are much more likely to result in ChatGPT recommending that business.

Review Sources and Analysis

Google's Focus

- Primarily relies on Google Reviews
- Considers review quantity and ratings

ChatGPT's Comprehensive Approach

- Reads **all Google Reviews** thoroughly
- Analyzes reviews from **every discoverable platform**
- Focuses on review content quality and consistency

Related Lesson: Learn more about review optimization strategies in "Get More Reviews" from The Google Business Profile module.

Brand Mentions vs. Backlinks

This represents one of the most significant differences between Google and ChatGPT optimization:

Google (Traditional Citations)

- Requires actual **links** to your website

ChatGPT (Brand Mentions)

- Only needs **business name mentions**
- No linking required
- Focuses on mentions in high-trust environments:
 - Reddit discussions
 - Local news articles
 - Community forums
 - Quora answers
 - Nextdoor posts

Game Changer: You don't need websites to link to you for ChatGPT optimization—you just need them to mention your business name in trusted environments.

The Critical Role of Schema

Schema markup is important for Google, but it's **even more critical** for ChatGPT optimization.

Why Schema Matters More for ChatGPT

- ChatGPT is much more likely to cite businesses using **Local Business Schema**
- Clear, structured answers to service-related questions embedded in schema
- Helps ChatGPT understand and categorize your business accurately

Coming Up: We'll dive deep into schema implementation in the "[Create Even More Schema](#)" lesson later in this module.

While these platforms operate differently, they're interconnected:

Google rankings serve as a trust factor for ChatGPT.

Businesses that rank well on Google are more likely to be recommended by ChatGPT. This means your existing Google SEO efforts aren't wasted—they actually support your ChatGPT optimization.

The 80/20 Rule

Most strategies that work for Google SEO will also help with ChatGPT recommendations. The key is understanding the **additional optimizations** that specifically target ChatGPT's unique evaluation methods.
