Generate Topical Relevance

Basic Site Structure

1.2x

2-min-33-sec ⚡ 2 min 8 sec

When building a non-local SEO website, structuring your content properly is crucial for establishing topical authority and helping search engines understand your site's hierarchy. In this lesson, we'll explore how to organize your website using a topical relevance map as your foundation.

Before diving into site structure, ensure you've completed the **Topical Relevance Map** exercise from an earlier module. This map serves as the blueprint for your entire site architecture.

The Hierarchical Structure

Your site structure follows a three-tier hierarchy:

1. Topic Level (Tier 1)

- Start with **30 main topics** based on your target keyword
- Each topic represents a broad subject area within your niche
- These serve as your pillar content pages

AI-Generate Keyword Variati...

Creating a Content Planner

AI-Rewriting Pages

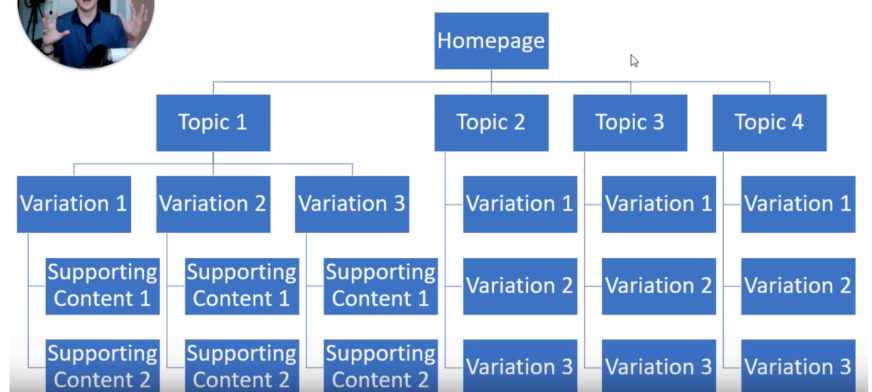

- Create **15 variations** for each topic
- These are more specific angles or subtopics
- Total: 450 pages (30 topics × 15 variations)

3. Supporting Content Level (Tier 3)

- Add supporting articles under each variation when needed
- Only create these if you need additional ranking power
- These provide depth and context to your variations

Site Structure

Strategic Internal Linking

Within Each Silo

Topic to Variations:

- Each topic page links to all 15 of its variations
- Links should be contextual, placed within relevant sections of text

Variations to Topic:

- Every variation links back to its parent topic
- Creates a strong hierarchical relationship

Link Circles:

Variation 1

- This distributes link equity throughout the silo

Supporting Content:

- Links up to its parent variation
- Variation links down to its supporting content
- Supporting content can also form link circles among themselves

Visual Summary

Topic 1

```
├─ Variation 1 ↔ Variation 2 ↔ Variation 3 (link circle)
|   └─ Supporting Content 1
|   └─ Supporting Content 2
├─ Variation 2
├─ Variation 3
└─ ... (up to 15 variations)
```

Topic 2 (separate silo - no cross-linking to Topic 1)

```
├─ Variation 1
└─ ...
```

Critical Rule: Maintain Silo Integrity

⚠ **Important:** Never cross-link between different topic silos. For example, Topic 4 Variation 2 should NOT link to Topic 1 or any of its variations. This maintains topical relevance and prevents dilution of your site's authority signals.

Implementation Strategy

2. **Add Variations Systematically:** Work through one topic at a time, creating all 15 variations before moving to the next
3. **Internal Links:** Add links as you publish, following the structure outlined above
4. **Supporting Content:** Only add when necessary for competitive keywords

Content Creation Tips

- While 450+ pages seems daunting, AI-assisted content creation makes this achievable
- Follow the guidelines in our [AI-Writing Content](#) lesson for efficient production
- Maintain quality standards even when producing at scale

External Link Building

Don't forget the external component:

- Aim to build at least **one quality backlink** to each page
- This signals to Google that your content is valuable and worth ranking
- Prioritize links to your topic pages first, then variations
