Creating a Content Planner

Before using AI to write content, you need a structured content planner containing all the essential information ChatGPT needs to generate high-quality, SEO-optimized content that matches what's already ranking in Google.

Note: For personal projects, a simple Word document works fine—you don't need a formal client-facing planner.

We're not guessing what Google wants—we're looking at what's already working and modeling our content accordingly.

Step-by-Step Process

1. Start with Your Target Search Query

- Type your keyword into Google
- Open the first 3-5 ranking pages

2. Analyze Word Count

Creating a Content Planner

AI-Rewriting Pages

3. Identify the Overall Content Topic

- Note how competitors frame their content
- Example: "motorized pergola" = "functional luxury at the touch of a button"

4. Collect Competitive H2, H3, and H4 Tags

- Copy all headers from competing pages
- These form your content structure foundation

5. Gather "People Also Ask" Questions

- Find the PAA section (add "FAQ" to search if needed)
- Click to expand all questions
- Copy everything—Google sees these as highly relevant

6. Collect Related Searches

- Scroll to bottom of search results
- Copy all related searches

7. Mine Google Image Subtopics

- Click "Images" in Google search
- Note the suggested subtopic filters

What to Skip For Now: Keyword variations, meta descriptions, and internal links will be added later using Page Optimizer Pro.
